

My baby (Debangshi De) born on 28 July 2014

at Bellevue Clinics, Kolkata under the treatment of Dr Suparna Banerjee, MBBS, DGO, MRCOG with assisted technology.

- The progress of my baby was too slow initially and diagnosed as "Severe IUGR" and preterm birth occurred on 32 weeks.

- Due to criticality of surgery, she invited to Dr Sumita Saha, MBBS, Gold Medalist, DCH(UK), MRCPCH(UK) during OT at Bellevue Clinics. I am really ever grateful to Dr Sumita Saha for her special achievement. Since birth i.e. from 28th July 2014, my Baby is under her treatment. As my baby's birth weight was 980 gm on the day of birth, we are under her treatments. She is still treating my baby like her own daughter.

- As we heard from the other staffs of Bellevue clinics that she made all the food prescriptions, Medicine prescriptions, various tests selectively as per the day to day progress of my baby, with her own speciality.

- Dr Sumita Saha is competent enough in her profession, decisions, actions and advice / suggestions given to us since my Baby's birth.

- She is committed and enthusiastic in her work and too much polite in nature. She listens to the patients and tailors her explanation to suit the patient. She is too much punctual at her visiting time, what we have seen so far.

Now, my baby is 07 months old and all is ok with the grace of almighty and may god bless Dr Sumita Saha, for her best effort.

Regards.... Mrs Piyali De
